

## ENVIRONMENTAL POLICY

Pollution Monitors Ltd recognizes as a primary responsibility the need to work towards a policy of a sustainable environment. Much of our work is to help others reduce airborne gaseous emissions by providing appropriate monitoring equipment.

As a small company we are minimal users of energy, well under the Climate Change Levy limits. However, we conserve energy wherever possible. As a policy we re-use packing materials and place waste paper and card in a designated on site skip for recycling.

The use of chemicals and water are incidental to our business and do not cause an environmental hazard.

Our service business requires visits to customer sites. We use public transport when practical.

The company keeps abreast of new environmental regulations for example the requirements of the Waste Electrical and Electronic Equipment Regulations.
